FLX-10

Twin-speaker headset with volume control, stereo/mono switch on 5 ft. cord. Includes an HE-2 5 ft. stereo headset cord extender.

\$25

The FlexFone FLX-10 model plugs directly into your PC sound card. It has a connector box that can sit on your desktop or attach to your monitor, so you can easily unplug the headset and plug in your speakers when desired.

USB Headsets

The following USB headsets plug directly into a USB port on the PC. The advantage of a USB headset is that it bypasses the sound card on your PC. If your sound card has a problem, the headset is not affected, as it's using Windows software audio controls instead of the hardware audio controls. Most users feel that the USB digital audio is superior to that provided by a standard PC sound card.

SP-USB

USB twin-speaker stereo headset with DIGITAL volume control on a 10 ft cord with USB plug.

\$35

SH-50 USB
Hinged-Stetho headset with digital volume control on a 10 ft. cord with USB plug.

\$35

The image shows the SH-50 USB headset, which consists of a black Y-shaped cord with a USB plug on one end and a black control module with a digital volume dial and a small microphone on the other. The cord splits into two black tubes that lead to the ear cups. The ear cups are clear plastic with black foam ear pads. The entire headset is shown against a light beige background.

SH-55 USB
Wishbone Y-shaped headset with digital volume control on a 10 ft. cord with USB plug.

\$35

The image shows the SH-55 USB headset, which has a similar design to the SH-50 but with a different microphone placement. It features a black Y-shaped cord with a USB plug, a central control module with a digital volume dial, and two black tubes leading to the ear cups. The ear cups are clear plastic with black foam ear pads. The headset is shown against a light beige background.
